

AreoCore Inc.

Company Overview

AreoCore Inc. specializes in the recovery and redistribution of high-performance materials used in precision machining and aerospace applications. We work directly with CNC machine shops, manufacturers, and fabrication facilities to acquire used or end-of-life materials that still hold significant recoverable value.

What We Do

We focus on sourcing worn, used, or surplus carbide tooling and other high-performance materials, including end mills, inserts, drills, and reamers. Our goal is to provide a streamlined solution for businesses to efficiently manage and monetize their excess or unusable materials.

Materials We Work With

- Tungsten Carbide (End Mills, Inserts, Drills)
- Inconel
- Titanium
- High-Temperature Alloys (Hastelloy, Monel)
- Tool Steels (H13, D2, etc.)

Who We Work With

We partner with precision machining companies, aerospace suppliers, medical manufacturers, and metal fabrication shops that generate high volumes of tooling wear and material scrap.

Our Approach

AreoCore positions itself as a professional material recovery partner rather than a traditional scrap buyer. We prioritize long-term relationships, consistent pickups, and transparent pricing based on current market conditions.

Value Proposition

- Turn unused materials into immediate revenue
- Simplify disposal and recovery processes
- Provide consistent and reliable pickups
- Maintain a professional, service-oriented partnership

Mission

To become a trusted partner in high-performance material recovery by providing efficient, transparent, and scalable solutions for manufacturers and machining facilities.
